

Transition Work

Choose a subject you are interested in.

e.g. climate change, spread of disease, the fashion industry, a sport, exam results, financial markets etc.

Search for 5 different graphs that relate to the topic.

Paste these into a word document.

For each graph, describe the trends and patterns in the data.

Comment on the validity of the data, thinking about how the data might have been collected and whether it provides the information you would regard as important.

Is there any additional data that you think would be important or interesting to collect?

We will use these as the basis of discussions in our first lessons.
